Overview

Clone: SB30c  
Isotype: Mouse (BALB/c) IgG2a  
Immunogen: Recombinant human TIMP-4 (a.a. 35-224)  
Specificity: Human/Mouse/Rat TIMP-4  
Alternate Name(s): Tissue inhibitor of metalloproteinase 4

Description

Tissue inhibitors of matrix metalloproteinases (TIMPs) constitute a family of secreted multifunctional proteins which are classified based on structural similarity to each other as well as their ability to inhibit matrix metalloproteinases (MMPs). TIMPs play a critical role in ECM homeostasis but have also been shown to have erythroid-potentiating and cell growth-promoting activities. TIMP-4, unlike TIMP-1, TIMP-2 and TIMP-3, shows restricted localization to cardiac, neural, breast, and muscle tissue. Cardiospecific TIMP-4 seems to play a significant role in regulating the normal cell phenotype since reduced levels elicit cellular transformation.

Applications

WB – Quality tested  
ICC  
ELISA

Working Dilutions

For Immunoblotting:

- Purified (UNLB) antibody ≤ 2 µg/mL  
- HRP conjugate 1:1,000 – 1:2,000

For Other Applications:

Since applications vary, you should determine the optimum working dilution for the product that is appropriate for your specific need.
Handling and Storage

- The purified antibody (UNLB) is supplied as 0.1 mg purified immunoglobulin in 0.2 mL of borate buffered saline, pH 8.2. No preservatives or amine-containing buffer salts added. Store at 2-8°C.
- The horseradish peroxidase (HRP) conjugate is supplied as 1.0 mL of stock solution in 50% glycerol/50% PBS, pH 7.4. No preservative added. Store at 2-8°C or long-term at -20°C.
- Reagents are stable for the period shown on the label if stored as directed.
